LOVE'S EXCHANGE.

Why bury all endearment in our hearts, And never know the joy of love confessed? He feels the heav'nly bliss that it imparts Who loves, caresses, is loved and caressed.

Why keep our kisses for the death-cold face, To give them all with unavailing tears? Why not bestow them while they may crase A line of care and brighten weary ye."

The dumb, cold clay will no spirit thrill, ... Nor touch of ling'ring lips, nor last em-Endearing words ne'er reach the heart so still When we shall mourn above its resting place.

O friends, I pray, ye who are friends indeed, Keep not your kisses for my frozen face: The low, sweet word, the fond caress I need While toiling in life's weary-weighted race.

My marble lips can make no warm return, Nor eyes, nor words can utter lovo's de-light; I will not need, nor will my spirit yearn For love's exchange, when I am still and

BUTTONS.

Insignia of Rank Which Is of Consequence in China.

Great Men in Countries Measured by Brass Buttons-The Bachelor's and Married Man's Buttons-A Fortune by a Rich Manufacturer.

When a man says "I don't care a button, he means to convey the idea that the subject under consideration is of no value and he is entirely indifferent to it, but if he lived in China he would not use that figure of speech. There a button is of some importance, for there a man is known by the button he wears. Show a Chinaman a man's button and he will tell you what he is. For buttons he will work, and intrigue, and fight, ambitious to be translated from white to red, and from red to blue, while for the vellow but-ton—the imperial yellow, which makes a man brother to the sun and uncle to the moon—what will he not do for that? Everything, anything. In China public servants are divided into nine ranks, each of which has two classes, thus forming eighteen classes of officeholders. They are distinguished by the peculiarities in form and sub-stance of the buttons they wear, which range from precious stones down through various grades of value to bits of glass.

Nor are buttons so indifferent to us as the common saying might imply. Have fair readers over seen a West Point cadet return home arrayed in blue and brass to bask in the smiles of blue and brass to bask in the smiles of a fond mother and admiring sisters? Have they noticed the enthusiasm his buttons awaken? Nothing could induce that youth to part with his buttons, except to gain the buttons of a Lieutenant. The Lieutenant aspires to the Captain's, and the Captain to the Major's and so on up through all the army grades, until at last there are no more buttons to conquer. So in the navy, from naval cadet to Admiral, button worship goes on, and we Lieutenant. The Lieutenant aspires to the Captain's, and the Captain to the Major's and so on up through all the army grades, until at last there are no more buttons to conquer. So in the navy, from naval cadet to Admiral, button worship goes on, and we have but little to boast ourselves over the Celestial children of the almond eyes and slanting brow. There was, indeed, our great General, who has been laid to rest amid the tears of the Nation, who did not seem to have the button mania and never looked very bright or glaring in the eyes of his fellow soldiers; but there were numerous others, who, surrounded by gorgeous others, who rightly in tinsel, and not infrequently looked like a brass foundry with the front door open. It is no reproach to them. Some of the world's bravest men had this pardonfoundry with the front door open. It is no reproach to them. Some of the world's bravest men had this pardonable vanity. Murat shone resplendent when he headed a cavalry charge. Scott, at Lundy's Lane, and in all his battles, was arrayed in full-dress uni-Nelson, at Trafalgar, had on all his buttons and badges. Doubtless they felt better and they fought better, and the world may smile a little, yet honors them none the loss. A blue coat with brass buttons was part of the habitual costume of Daniel Webster. It seemed as if it would be unconstitu-tional for him to wear anything else, and he stuck to brass and blue, and buff waistcoat to the end of his life. The members of the famous Pickwick Club wore a brass button on their coats, bearing the initials P. C.—pe-culiar coat, as Mr. Jingle translated it involved Mr. Winkle in a duel. So, in doesn't know what he is talking about.

He would care, if he would only think for a moment on what the button has done for the world. If the loss of a and showed it to the officers, who soon raised a subscription of five soon raised and sent the child to that marks the difference between the tons and you take away steamboats, she sent a telegram: "I congratulate telegraphs, railroads, the newspapers, my dear uncles heartily."—N. Y. Post. and all the wonderful appliances that make life pleasant in the nineteenth

The evolution of clothes fastenings was something like this: Thorns, fish bones, strings, metal clasps, pins and buttons, and the buttons did not come until about the time Columbus discovered America. But buttons alone were not quite sufficient, and it took our good ancestors two centuries longer to invent the button-hole. That is to say, buttons were first used entirely for ornament, and it was not until the close of Queen Elizabeth's reign that the great convenience of buttoning one's clothes, instead of pinning them or fastening them with

clasps, was discovered. The ornamental purpose of the but-ton is still in vogue in ladies' costumes and in men's survives in those two helpless buttons on the back of their coats. Some dreaming enthusiast has calculated that if we would only forego the use of those two buttons the amount saved in a few years would pay the national debt, or would found a charitable institution that would provide for everybody, substantially banishing pov-erty from the earth. But fashion de-mands that we should retain them, and so the national debt must take care of itself and the millennium still delay its coming. Last came the self-fastening button, very recent, as we all know, a boon to bachelors and lone, lorn widowers. Time was when a wife was an indispensable necessity to every gentleman for his buttons' sake. Studs and self-fasteners have changed all that, and now a man need not marry unless he wants to. Indeed, a marry-ing man may be known by the buttons he wears. If he wears study and selfhe wears. If he wears studs and self-fasteners he is hopelessly independent. If he still clings to pearl buttons and the art of sewing he is sure to marry on the first opportunity.

Buttons are made of almost every

Buttons are made of almost every material and in every color. There is scarcely an article can be named, leaving out fats and such things, that can not be turned into buttons and after which the public does not run with frantic eagerness. It has infinite variations, and its fashions tread upon each other in swift succession and crowd the wearer. Their manufacture is enormous, our largest factories being at mous, our largest factories being at Newark, N. J., Waterbury, Conn., and Springfield and East Hampton, Mass. We import from Germany, France and England buttons to the value of three million dollars yearly.

The first manufacturer of buttons in the United States was Samuel Willisston, of East Hampton, Mass. His father, grandfather and great grand-father had been ministers in Connecti-cut and Massachusetts, and he intended cut and Massachusetts, and he intended to be one, but while studying for that profession his eyes gave out and he nearly lost their use. He gave up the ministry, became a country storekeeper and married. His wife to help keep the wolf from the door commenced to cover by hand the wooden buttons of the time, which met with quite a ready sale in the store. Behold how large a matter a little button maketh. The matter a little button maketh. The salability of the article led to a study other charities, more than one million five hundred thousand dollars. That is what buttons did. Could anything better be said about them? Observe, too, it was the wife whose industry selected the object which made the fortune. If Mr. Williston had remained a bachelor and depended on self-fasteners or studs, he would never have been able to give a million and a half

SEED CORN.

Why and When Every Good Husbandman Should Select His Own Seed.

What a man sows he reaps. The selection of seed is, therefore, of the highest importance to the farmer who wants to reap the best and the most as a recompense for his labor. Labor is thrown away on worthless material. A man may spend as much skill and pains in carving a medallion out of a piece of sandstone or soft slate as he might out of a hard, beautiful onyx or the purest alabaster, and at the end he has only trash that is worthless and disagreeable to show for it. So a man may crib his corn in a few weeks, and in the sand of real transfer from a many contract of the sand in the spring, from a mass of moldy and refuse ears, he may hastily gather seed for the next crop, but if he expects a good and abundant yield from it he will be sorely mistaken.

The enormous losses which have fall-

en upon farmers the past few years through the use of inferior seed have wrought damage to the extent of millions of dollars; some farmers lost nearlons of dollars; some farmers lost nearly their whole crop last year and the
year before, and thousands lost a large
portion of it, and all this might have
been prevented by the simple precaution
of selecting good sound seed in the
fall. There is another fact which should
be considered, and that is that corn is
susceptible of greater improvement
through the selection and use of the
best seed than any other plant grown best seed than any other plant grown upon farms, and at the same time this plant can be better improved by using home grown seed than that procured at great cost from a distance.
There are many wise and thoughtful
farmers who have been saving seed
from their best plants for many years
—twenty, forty and some for fitty years -and their reputations for growing good corn and large crops have made them the seedsmen of their localities. Farmers who might have done the terms for the tourists who take the beaten track round the world.—Boston Budget.

—A cyclone resembles a woman, because when it make its mind to gesomewhere all earth can't stop it.—Otto City Derrick.
—'Pa, what do they always have a handkerchief over Justice's eyes for?"

"Because, my son, the lawyers have spared and the public wealth increased. Because, my son, the lawyers have alked her blind."—The Judge.

—Old gentleman—"Ah! Mrs. B. did ou keep a diary during your visit to special pains to cultivate the crops grown from it so as to improve the grain in every possible way. And just here we ble the so-called experiments of some agricultural experiment stations, the object of which has been to try to show that moldy, half-ripened, shriv-eled corn would grow and produce a crop. What is the possible use of such an experiment? It may serve to encourage a thriftless farmer in neglecting the plainest precaution and duty, and so injure the interests which should be helped and encouraged by these stations, but no reasonable man would ever act upon such a suggestion. Besides, it is not true. It is an apparent impossibility that a grain of corn deficient in substance can bear a germ of sufficient vital strength to reproduce the original quality of seed. If it were otherwise, then all the claimed results of breeders from the excellent care and cultivation of a race of cattle and the selection of the best dams and sires would be falsified, and the poorest halfstarved scrub might be used as the

progenitor of a superior progeny. a man sows so shall he reap.'' Then the farmer intent upon improv-ing his corn will go into the field as the ears are ripen ng and select those plants which most nearly meet his ideal of what the best corn should be-plants with moderately sized and well leafed stalks which bear two ears, both well filled out and sound, and the earliest ripe—and from these plants he will choose the upper ear for seed, and mark the stalk by tying a colored strip around the top of it. Or as soon as he expert and can select these stalks as he goes along in cutting the crop he leaves them standing until the rest is all down and these ears are ripe and dry, and then proceeds to save them in the best manner. If there is but one good ear on a stalk it may be saved, but as multiple earing is very desirable we would choose a less attractive ear from a twinbearing stalk in preference to a single ear. But the top ear should always be taken because it is the earliest.

These selected ears may be strung opon a wire or a cord in dozens by using a long twine needle, and eight strings would make a bushel of shelled corn. These strings should be hung in a dry place out of the reach of vermin, and no extreme of cold likely to occur will injure them. In the Sc where the corn "weevil," as it is called, but really the corn moth worm, abounds, the corn should be kept in bags or old kerosene oil barrels and thus out of the reach of this pest. As early maturity is no special advantage in the South, it is not necessary to select the first ripe ears, but only the largest and best tilled. And yet for some purposes and at some times early corn is useful even in the South, where the present season corn has been bringing from \$1 to \$1.25 per bushel in places where the grop was short last year. -N. Y. Times.

HORN SICKNESS.

Prompt and Decided Action. Years ago a notion prevailed among stockmen that when the horns of a sick animal were cold at the base it was indicative of some disease of the horn, the nature of which no one professed to understand. Horn all, according to Tellor, is now understood to be a special diseased condition of the blood, in which there is either a deficiency in the amount of blood in the body or a diminution of some of its important con-stituents, especially the red blood corpuscles. Such condition may follow an attack of any acute disease where recovery is slow and partial, but generally results from poor or insufficient food, exposure and neglect, foul air, lack of cleanliness and other necessary condi-tions of health. The food may be abundant in quantity, but contain an excess of water and a deficiency of excess of water and a deticiency of solid matter. An exclusive feed of roots or of green food growing on damp soils, or the persistent use of a single variety of food, sometimes results in this deprayed condition of the blood. The symptoms are those of great debil-ity. The animal is thin in flesh and hids have defen leave, with heir ity. The animal is thin in flesh and hide bound, often lousy, with hair standing staight out from the body or turned toward the head. The appetite is ravenous or irregular; the bowels

The lining membrane of the mouth is unusually pale and the horns colder than natural, sometimes almost as cold as those of a dead animal. It is this condition which gives the disease its name, and the ignorant cow doctor, with no knowledge of the anatomy and physiology of the animal, imagines the disease confined to the horns, which, under his treatment, will either be bored with a gimlet and turpentine squirted into the orifice, or an active plaster will be applied to the head at their base, which, as the temperature results from a low condition of the blood, can have no beneficial effect. Later symptoms of the disease are swellings under the iaws and about the navel, also dropsy of the belly. The cause of the diseas being understood, common sense will suggest that the first thing to do in the way of treatment is to see that the aniway of treatment is to see that the animal is well fed, comfortably housed and kept perfectly clean. The food should be of the best quality, given in small quantities and often. If lousy apply Persian insect powder thoroughly three or four times every other day. Give from one pint to one quart of lin-seed oil, varying the quantity to cor-respond to the size of the animal. If the animal suffers constantly from diarrhœa, give powdered chalk one ounce and bisulphate of soda one ounce, three times a day, mixed in feed. If this does not produce a tavorable effect, mix oil of turpentine one-third of an ounce and laudanum one-third of an ounce with three raw eggs, beat all together in a pint of warm water, and give at one dose. From two to three doses a day should be given, according to the severity of the case, until the desired effect is produced. After which get a druggist to mix thoroughly-powdered sulphate of iron two ounces, powdered nux vomica one ounce, and powdered gentian one ounce. Divide into seven powders and igive one every night in meal or other feed until all are used, then omit one week, after which repeat the rowders until seven more are circular. the powders until seven more are given.

This treatment will effect a cure without boring the borns.—N. Y. Hera'd,

ELEGANT TOPLETTES.

of the Materials Considered Comme Il Faut for Fall and Winter.

Buckles, clasps, slides, and hooks in gold, silver, steel, bronze, enamel, pearl, amber and jet are used with a free hand this autumn both for dress and millinery purposes. These various ornaments, in all manner of odd, quaint devices, often represent nothing but the vagaries of the design imagination. Antique gold belt clasps, with dog-collar ornaments to match, set with brilliant Rhine stones, or ornaments for a like purpose made of iridescent enamel, infor all patterns, are added to many of the elegant costumes of silk and satin, and also to handsome tailormade suits of rich hued tricot or boucle fabrics. With the new fashion of loose Fedora vests, to wear beneath pretty house jackets, no buttons are visible, and the full-gathered fronts are caught at the belt with ribbons, and

held with these fancy clasps, one large one or two smaller sizes, as preferred. Some of the elegant fancy woolen fabrics brought out recently are as ex-pensive as silk or satin goods of fine quality, and are far more popular for street wear than either of these materials, if we except, perhaps, the dark durable surabs. The new vigognes, for instance, are shown with exceedingly rich broche figures, small, but magnifirich broche figures, small, but magnifi-cently colored, over plain, rich, darkly-dyed grounds. The broche designs, al-though showing a mingling of Persian colors, are always in perfect harmony with the prevailing shade of the goods they decorate, reminding one of the autuma foliage, a trifle subdued from its first vivid brilliancy of coloring, against the background of a dull, dark September sky. These rich figures are not woven in clusters, but detached and sprinkled at quite wide intervals over

not woven in clusters, but detached and sprinkled at quite wide intervals over the soft, handsomely finished fabrics.

This is to be a "checkered" season in the matter of woolen fabrics, judging by the endless lines and grades of plaided and blocked patterns which strew the counters and adorn the shopwindows of "exclusive" who are sure to secure the leading plaids and checks are uncommonly handsome, and there is an absence of the over-brilliant coloring which frequently characterizes these designs. Cream and ruby, olive and doe color, dark blue and deep crimson (the fash-ionable "Princess of Wales" combination), and an artistic shading of a tion), and an artistic shading of a single color merely outlined at the edges of each plaid, with hair lines of a contrasting hue, are among the many patterns displayed. Long, full drapings, laid in heavy flat folds at one side, or down each side of the front of the dress, is the proper and strike the product of the color of the dress, is the proper and strike the product of the color of the dress, is the proper and strike the product of the color of the c is the popular and stylish mode of arranging the skirts to these. Velvet is ranging the skirts to these. Velvet is used as a garniture upon checked and plaided suits in preference to other trimmings, and very frequently the dress, wrap in the shape of Gladstone jacket, or long French pelise, and the princess bonnet are made to correspond. The new double skirts are likely to

become general as the season passes, and the fashion is eminently calculated for the heavy woolen materials which form so large a part of cold-weather at-tire. The double skirt increases the tire. The double skirt increases the warmth of the gown, and does away with complicated drapery. Upon some models these skirts are cut of nearly equal length, and are set into rather short-waisted but pointed bodices in thick gathers or heavy folds. The up-per skirt is faced up for a considerable distance, with a contrasting color. It is then caught up high on one side or on both sides—a la milkmaid—as taste suggests. The bright facing is intended to be shown, and this color is repeated on the waistcoat and upon the collar and cuff facings.—N. Y. Post.

Contagion by Mail.

The Watertown (N. Y.) Times gives the case of a little girl who was dying with scarlet-fever. She sent a "dying kiss" to a little friend, which was imprinted on a letter and a circle drawn around the kissed spot. The "little friend!" kissed the spot when the letter was received and shortly afterward be-came a victim to the disease. It was the only case in the place, and her physician believes the affection was communicated through the mails.

GOLD DIGGING.

Uneducated Men Who Received More Harm Than Good from the Acquisition of Wealth.

The more the element of chance enters into the acquisition of money, the greater is the harm it does the man who gains it. This probably is the reason why gold-digging seldom elevates, either morally or materially, those who follow it. It demands of the digger enterprise, perseverance, toil and indifference to hardship, qualities the exercise of which should make a man of him. Yet the "luck" associated with the business seems fatal to manly virtues and permanent pros-

The digger may toil for weeks with-out "raising the color," and all the time he sees his neighbor of the next "claim" washing out an ounce of gold to the pan. The view is not likely to eradicate his natural envy or covetousness. On the other hand, he may, by a few days of "prospecting," wander-ing over the barren hills, with a donkey for a companion and a burdenbearer, stumble upon a fortune. In most cases the "find" tempts the finder to add another to the thousands of illustrations of the fact that that which is gained without labor is spent without thought.

A gentleman of large experience in the Australian gold fields says that al-most the only instance he ever knew where an uneducated man did not re ceive more harm than good from find-

ing gold, was the following:

A man who had been a few months in the colony, and had supported himself by digging in a garden, went up to the "diggings." He knew nothing of mining, and could hardly tell quartz from common rock. Within two weeks he stumbled upon a nugget of pure gold, weighing seventy ounces. That very day he started back to the coast, as if in a hurry to get away from the mining district. On reaching a sea-port, he engaged passage for England on the first boat, and went home to enjoy the profits of his brief mining expedition.

As an offset to this rare case, the gentleman mentions several cases in gentleman mentions several cases in which men were ruined by their suddenly acquired wealth. Four sober, industrious men worked a claim in partnership. They struck gold, and in a few weeks took out one hundred thousand dollars apiece. But in two years three out of the four died drunkards, and the fourth lost every penny of his fortune by prospecting for gold and buying unprofitable claims.

A blacksmith dabbled in mining, and

ot into debt. One day he struck gold. He worked on, and was soon in the receipt of twenty-five hundred dollars a day. His claim continued to "pan out" better and better, until no one, not even himself, knew how much he was worth. The man had the stuff in him out of which a noble character might have been formed. He taught himself to read and write, and for a

of business But madness was in his blood. He took to wild speculation in gold mines, set up a racing stud, "bulled" or "beared" the wheat market, and went into every thing which admitted of gambling. The nervous strain tempted him to brace himself with stimulants. He became a drunkard, and in a few years was gazetted as a bankrupt.

The young man who by industry and self-denial saves his first one thousand dollars-John Jacob Astor said it cost him more to gain that sum than it did to acquire the rest of his fortune—is prepared to carry steadily, without losing his head, the ten or twenty thousand which he may get afterward.

A few years ago a young man of Boston was the marvel of his friends. His mercantile ventures turned out a large profit. Whatever he touched,

Knowing that it requires as much selfcontrol and wisdom to keep a fortune as to gain one, they looked to see if this young Napoleon of the street was moved by a mercantile head or a gambler's rashness. Within four years from the time that his name was a synonym for success, he was a bankrupt. - Youth's Companion.

A DIPLOMATIC RUSE.

How Lamartine Escaped the Embraces and Kisses of Fifty Old Women.

In the year 1848 Lamartine received at the Hotel de Ville in Paris a deputation of so-called "Vesuviennes"-i. e., women of the people, who bore a strong resemblance to the Tricoteuses, or knitting-women of the Great Revolution, and looked as if they meant mischief. The band penetrated to the room where Lamartine was at work; to be able to meet the similar problems he stood up and inquired what the of this age with equal success. The ladies wanted. "Citizen," answered science of irrigation must evidently ladies wanted. "Citizen," answered their spokeswoman, "the Club of the Vesuviennes have decided to send a deputation to show how much they admire you. There are about fifty of us here, and we have received orders to

kiss you." The tone and manner in which this was spoken showed plainly that they would brook no denial. However a lucky inspiration came to the relief of the poet. "Citoyennes," he said, "I thank you very much for the sentiments to which you have just given ex-pression, but allow me to tell you that patriots like you have ceased to be women, you are men—men of honor, too. Now, men don't kiss each other, but content themselves with a shake of the hand." The President of the Provisional Government by this clevet maneuver escaped fifty embraces, to his no little comfort and joy.—Chicago

-A pulley thirty-four feet in diameter and weighing eighty-three tons has just been made in England. It has grooves for thirty-two ropes, which, together, will transmit twelve hundred and eighty-horse power, and the rim will have a velocity of more than a mile in a minut

THE WINTER PALACE.

An Interesting Account of One of the Czar' Homes—Its Building, Cost, Etc. The Winter Palace, although con-

structed by Empress Elizabeth, was not completed until Peter III. ascended the throne, and the square in front of it was still covered with the shops and huts of the workmen. Heaps of stone, brick and rubbish obstructed the ap preaches to the palace. In order to clear the place Baron Korff, who then filled the post of Chief of Police at St. Petersburg, proposed to the Emperor to give permission to the poorer inhabitants to carry away these unused materials. The plan pleased the Emperor, and orders were immediately given to carry it out. The Emperor witnessed from his windows the operation, which was completed by the evening. The Emperor, on installing himself in his new balace, occupied the himself in his new palace, occupied the part looking onto the square and the corner of the Millionnaia. This portion of the palace bore the name of the King of Prussia's apartments. The occupation of the palace was accompanied by no extraordinary ceremony. The room occupied by Peter had been decorated by the architect Tcheva-kinsky, a pupil of Rastrelli, and the flooring and gilded cornices were brought from Italy. Peter's bedroom was in the extreme wing, and beside it was his library. Above the entrance door he caused the gallery to be constructed which he turned into his working cabinet and furnished at a cost of more than three thousand five hundred rubles. The Empress Catherine occupied the rooms afterwards known by the name of the Empress Marie Feodorovna. The day the court occupied the Winter Palace (7th of April, 1762) was marked by the conse-cration of the Palace Church under the name of the Resurrection. Later on, in 1763, on the occasion of an ancient image of Christ being removed to the church, it was consecrated afresh by order of Catherine II. as that of the The embellishment of the interior and the furnishing of the palace were continued under Peter and only completed by Catherine. The total up to the year 1768 was esti mated at two million six hundred and twenty-two thousand and twenty rubles, or about four hundred thousand The principal director of the works in the interior was the celebrat ed amateur Jean Betzky. In 1767 th annexe of the palace destined to be the Hermitage was commenced, the archi-tect Delamotte being intrusted with its execution. This building, oblong in shape, extended from the Millionnaia to the Quay. Four years later a sec-ond building was erected on a plan of the architect Felton. In 1780 several fresh wings were added, and the Empress ordered the architect Guaranghi to build a theater, which was at the latest to be completed by August, 1784. The same architect erected the arch connecting the Hemitage, with arch connecting the Hermitage with the theater, and with the part of the palace containing the Raphael galler-ies. In 1786 the marble gallery (conseason went onward fitting himself to taining the Hall of St. George and the become a good citizen and a safe man Throne-room) was commenced, and in 1794 a superb throne was placed in the former. This throne was the masterformer. This throne was the master-piece of the architect Starow.—Novoe A GREAT WORK.

Feasibility of Irrigating the Famou San Joaquin Valley.

While the "Great American Desert" of tradition has shrunk to small proportions before the advance of civiliza tion, there are large areas in the west-ern half of the United States where the difficulty of securing a good water sup ply is still a serious obstacle to settle ment. The San Joaquin Valley of California is filling up with population at a rate that threatens to make this a at a rate that threatens to make this a serious question at no distant day. The wet season brings a plenty of rain, but the water does not last the year round. It is suggested that this diffilarge pront.

stocks or merchandise, turned into st culty can be overcome by constructing immense reservoirs, in which the water are the moraines of ancient glaciers, which in prehistoric times shut in large lakes. The waters after-ward made a channel for their escape by partially cutting away the ac-cumulations of stone and earth in the moraines, but in many cases these ancient breaks might be restored by modern industry. In this way it would be feasible to secure large reservoirs, where the surplus drainage of the wet seasons could be kept for use during the dry months of the late summer and autumn. Precedents for such works can be found in ancient history, nota-bly in a vast reservoir in Arabia, made by a dam two miles long and a hundred and twenty feet high, which restrained the current of a large stream for about two thousand years. The California papers think that if the en-gineering skill and capital of that early period were equal to such an achievement, modern science and money ough play an important part in the development of large regions in our Western country.—N. Y. Post.

The Death of Animals.

But what makes whales come on shore when they feel ill? It looks like suicide-and may be. That beasts and birds in the same way go aside from their comrades to suffer the extreme trial of death is a pathetic fact which is well known. Sometimes, no doubt, their friends desert them. They feel that the companionship of an enfeebled individual is a possible source of danger; or, perhaps, instinct teaches them thus to avoid the risk of infection. Or, again, it may be that the sight of death is intolerable to them, just as it has been and is to many human tribes, who leave their dying to pass away in solitude, and will not remain to witness the last infirmity of man. Whatever the explanation, the fact remains that in the animal world as a rule creatures go away and die by them-selves, and the water-folk commit what may be called suicide by leaving their own element for one in which they can not live.—London Telegraph. THE MODES.

Stripes, Not Checks, to Be the Rage and Hues in Red and Gold.

The new materials for autumn and winter wear are already displayed on the counters of our large dry goods stores. Infinite variety, harmonious blendings of dark, rich, bright shades, and a fancy for rough-faced fabrics, are the signs which she who runs may the reign of velvet and lace is to endure, and that combination suits will, if possible, be even more fashionable than ever. Very few suits will be made en-tirely of one fabric. Of all the fancies shown each has its matching cloth, and tailor-made suits are of a subdued stripe, plaid or check, in somber colors, with plain cloth matching one or other of the checks or stripes. In Paris the passion is for stripes—plain stripes, fancy stripes, Pekin stripes, narrow stripes and broad stripes in every possible combination of color and material. The hue of the hour is bronze—all the bronzes, indeed—brown, copper and green. There is a new sapphire, so called, which is really the old gens d'armes, and this, in combi-nation with a brilliant copper tint, forms some of the most striking bro-cades of the season. There is a noticeable falling off in the popularity of gar-net. The new reds are, for the most part, vivid in tone or dark with russet ints, like autumn leaves. Gilt is passe still, golden tinges are many, especially in shot effects, and bronze d'or, the beautiful golden bronze, still holds its

The practical economist may gratulate herself on the fact that there will be no difficulty in making over last year's dresses. All dark, standard colors are worn—indeed, very few shades are even passe—while the in-finite diversity of color combinations in fancy materials makes it easy to find something to go with anything

trimmed with lace, but there is always a broad sash at the back, usually moire, sometimes of velvet striped rib-

is for sashes. Whenever and wherever one can be worn it is worn. They form side panels, or are draped across the front of the dress, or, most frequent, arrangement of all, in a huge loop and ends at the back. The new sashes are magnificent. Most of them are strined and in some satin, faille, plush and velvet all appear. Roman stripes and Oriental color blendings are prominent and a popular fashion will be to illumi-nate a dark or black s.lk with such a sash, using it as side panel or back drapery and vest. The trimming of the season will be velvet. You can not possibly err in using it on any dress, either in contrast or in same color The only question is plain or fancy velvet, and this is, of course, to be decided by the manner of costume to be trimmed.—Philadelphia Press.

THE EGG DANCE

One of the Amusements of the Bhopal

Girls in East India. A traveler gives us a pretty description of the graceful egg dance which was performed for his amusement in the Court of Bhopal, India. It shows her. us that our sword dancers and our young ladies of the ballet are not quite up to the standard of the Bhopal girl. He tells us that a slender girl, arrayed in an embroidered bodice and short skirts like those worn by the peasant women in this part of India, came forward, very fascinatingly to him, with wreathed smiles and dainty steps, and also insteps that were very neatly modeled. "She seemed to me as if she wanted me to buy her basket of eggs along with herself and that the eggs along with herself and that the eggs were real eggs. She did not dance on them, however. She wore on her head a large wheel of wickerwork, and around this and equal distances were placed threads with slip knots at the ends, in each knot a glass bead to keep

and the dancer spins around in time with the measure, which grows faster and faster. As she turns she seizes an egg from the basket, which is held on her left arm, and rapidly inserts it in one of the knots. Her circular motion causes the thread to stretch out like the spoke of a wheel. She keeps on doing this till every knot has its egg and her head is surrounded by a sort of aureole. When she has succeeded in placing all the eggs she spins around so fast that her features can hardly be seen. A false step and Humpty Dump-ty would have a fall indeed. She has now the most dainty and difficult part of her dance to execute, for the dance is not done till every egg is taken from its thread and laid safely back in the empty basket. One by one the Indian girl accomplishes this, never crushing a shell or displacing a single egg. When all are restored she stops her dizzy whirl, courtesies with grace, and offers her basket to the lookers on, who often break the eggs to prove that no juggler's trick has been used to change them."—N. Y. Herald.

The Matrimonial Ventures of Some of the Masters of Harmony.

Ludwig Spohr got his wife in a very Iroll manner. When Spohr, who had just been made Director of Concerts by the Duke of Gotha, stood up to conduct the first concert as such, he heard a beautiful young lady say to another in the first row: "Look at our new Direcread. Looking closer it is evident that tor of concerts. What a tall hop-pole he looks." Spohr inquired after the young lady who had criticised his person in such a curious way, and heard that she was the daughter of the first prima donna, Scheidler, and a harpist of the first rank. The next day Spohr called upon Frau Scheidler, and was introduced to her daughter; the acquaintance became more intimate, and he was finally engaged to be married to Mile. Scheidler. The artistic couple, Spohr playing the violin and his wife the harp, had afterward the most enthusiastic reception during their con-cert tour. Particularly did the brilliant solo pieces for violin and harp written by Spohr excite everywhere the highest approval. When Spohr later began the composition of the operas "Jessonda," "Faust," etc., both mother and daughter assisted him in every possible way.
Cherubini, the composer of the opera
the "Water-Carrier," and the celebrated "Requiem." married in Paris during the very turbulent times of the great revolution. His wife was Cecilia Tourette, the beautiful daughter of a musician at the Italian Opera of Paris. It was a time when each morning hun-dreds were sacrificed on the guillotine and thousands looked on unconcernedly, going in the evening to the theater

ly, going in the evening to the theater and the opera to enjoy themselves. On the morning of his marriage a large number of "sans culottes," the reddest of the red republicans, went before the house of Cherubini, made the master come out, put a guitar into his hands, and dragged him during the whole day through the streets of Paris, where the poor artist. streets of Paris, where the poor artist had to accompany the ribald songs of these terrible gentry. Late in the even-ing Cherubini was released, after he had been forced to enter the National guard.

Rossini married first a singer, Sig Rossini married lirst a singer, Sig-nora Isabella Colbran, prima donna in the company of the celebrated impre-sario Bariliago, in Naples. This lady made as great a furore by her splendid figure and imposing appearance as by her extraordinary voice. Particularly as Zelmira this beautiful diva created a sensation in Vienna in 1822. Later, when Rossini gave up his art and commenced a very lucrative business in fish, Isabella died; she had been by no means agreeable to such a change of profession. Rossini, who was beyond measure avaricious and lazy, found a new wife in Mme. Olympia Pellssier, who outdid him in avarice, and who wisely made herself mistress of the sit-uation by taking all business matters upon herself. Rossini received annual-ly twenty thousand francs (four thousand dollars) income as Inspector of Singing in France, and had also a large percentage from the production of the "Barber of Seville" and "William Tell." So well was it known in Paris how saving the housekeeping was man aged in Rossini's house that scarcel any one ventured to touch the food of drink offered to the guests at any o the soirces. Rossini became thoroughly henpecked under the management of his proud Olympia. He died before her, Olympia living ten years after his

death.

Bellini was not fortunate in love; h Bellini was not fortunate in love; he conceived a violent passion for a lady who was already in matrimonial bondage, Maria Malibran, the eldest sister of Viardot Garcia. Her husband, Malibran, had once saved her family when they were in great straits on a tour in Mexico, and she had married him from feelings of cratitude. Malibran was wealthy, but gratitude. Malibran was wealthy, but when he later became unfortunate in his commercial business, and was made a bankrupt, Maria went back to the stage, when Bellini composed the parts of Norma and Romeo on purpose for With these two roles. suited both her individuality and her artistic powers, Malibran conquered the world. Her husband died suddenly, and she married again the violinist and composer, De Beriot. This broke Bellini's heart; he fell dangerously ill, and died in the arms of the singer blache, while calling constantly for Maria. The sad end of the great com-poser really did touch Malibran's heart, and she was never able to sing again the tomb-scene at Juliet's coffin with with Bellini's music. Since then Bellini's Nontechi was always given for her in the third act with the music by Vaccy Maria Malibran's marriage was a happy one. Her second husband led his cele-brated wife from triumph to triumph. from festival to festival; Maria herself composed, designed and even made her own costumes, drove her own horses, and distinguished herself in swimming, athletics and horse-riding among the members of the Jockey Club, with whom she was able to sus-

tain a bet. Malibran was a great artist, but insufferable to her fellow artists; she persecuted Wilhelmina Schroeder-Devrient with sly intrigues, and it was she who said of Sontag in a disdainful manner: "She is great in her 'genre,' but her 'genre' is small."—N. Y.

Doubtful Flattery.

Miss Birdie McGinnis and Miss Esmerelda Longcoffin, two of the leading belles of Austin, were discussing a ball at which both had been present.

"O, I had such a compliment paid me by Gus De Smith," said Miss Birdie, giggling hysterically.
"Yes; what did he say?" asked Es-

merelda. "I had on my new bands, and just a little face powder, and my new silk dress fitted just as if I was poured into it, a-n-d ma said she never saw me look

so well, a-n-d—''
"What did Gus De Smith say?'' asked Esmerelda, impatiently.
"He whispered to me, 'Miss Birdie, you are fixed up so pretty to-night that I hardly recognized you." - Texas Sift-

—A new telegraph pole has been invented, which, if adopted, will make more business for the iron men and less for the lumber men. It is constructed of tubular malleable iron, galvanized, two and a half inches at the top, weight fifty pounds, and will stand a gr strain than the ordinary pole. The bot tom sets in a clam plate, six inches square, which grips the ground. Satisfactory tests have been made.—Chicago

Herald

-The time-honored custom of commemerating the anniversary of the death of Queen Louise of Prussia, Emperor William's mother, by annually present-ing six worthy bridal couples with a purse of 450 marks and a Bible each, was duly observed lately at the Potsdam-Court and Garrison Church.

that consumptives should be the least apprehensive of their own condition, while all their friends are urging and beseeching them to be more careful about exposure and overdoing? It may well be considered one of the most alarming symptoms of the disease, where the patient is reckless and will not believe that he is in danger. Reader, if you are in this condition, do not neglect the only means of recovery. Avoid exposure and fatigue, be regular in your habits, and use faithfully of Dr. Pierce's "Golden Medical Discovery." and everything.

The fashion of woolen is to be greater even than it was last year. The sam-ple books of returning buyers show hundreds of new fancies in these, most of them charming and many of them novel. The newest idea is an outcome of the passion for lace. By some magic of the loom a lace web is superimposed on the foundation, the effect being that of lace inserting on figures, laid over the cloth. The lace may be cut away and lifted from the fabric; it is alto-gether distinct from the foundation on which it rests. Woolen lace, it is prophesied, will have a great run. Worth and Felix are making demisaison toilets of this for their chateau customers. They—the toilets—are of the simplest description; a round skirt of yak or llama lace over a foundation of French faille, full gathered in front and on the sides, and box-pleated at the back. The bodice may be of lace over silk, or silk

bon.
